

LIST OF TABLES

2.1	Error recovery strategies	22
3.1	Parameters and specification of corpus	32
3.2	Some Typical Bodo sentences	32
3.3	Differences in Voiced and Unvoiced speech	33
3.4	Accuracy of first speaker (male)	40
3.5	Accuracy of second speaker (male)	40
3.6	Accuracy of third speaker (male)	41
3.7	Accuracy of fourth speaker (female)	41
4.1	Bodo digit recognition accuracy	69
4.2	Recognition accuracy in different set	71
4.3	Word recognition accuracy of the system	71
5.1	Variation in collected speech data	83
5.2	Different noise tags with % of occurrence	84
5.3	Rejection tag sets	85
5.4	Output of Signal Analysis Module and its decision	90
5.5	MFCC feature extraction parameters	91
5.6	List of training word, occurrences in training set and % of accuracy	93
5.7	Word accuracies with diff GMM sizes and fixed no. of tied states	94
5.8	Word accuracies with diff no .of tied states and 16 GMM vs 32 GMM.....	95
6.1	Recognition score using the built acoustic models.....	101
6.2	Comparing AM-1 and AM-2 on the test data set	101
6.3	Performances of the proposed adaptation approach with 4 top likelihood clusters derived out of 8 acoustic clusters employed for interpolating different model parameters	106
