63/2 (SEM-3) PHY 304, 305

2021

(held in 2022)

PHYSICS

Paper Code : PHY-304 (New)

(Advanced Condensed Matter Physics-I)

Full Marks - 80

Time - Three hours

The figures in the margin indicate full marks
for the questions.

1. Answer the following questions : $1 \times 5 = 5$

(a) The $n^+ - n$ heterojunction is a

(i) Rectifying contact

(ii) Ohmic contact

(iii) Near Ohmic contact

(iv) None of the above

[Turn over

- (b) The drift current density under reverse bias is due to the
- (i) Minority carriers
 - (ii) Majority carriers
 - (iii) Both majority and minority carriers
 - (iv) None of the above
- (c) Which of the following geometry is representing the armchair structure of a carbon nanotube ?
- (i) $\theta = 30^\circ$ (n, n)
 - (ii) $\theta = 0^\circ$ (n, 0)
 - (iii) $\theta = 15^\circ$ (n, m)
 - (iv) $\theta = 15^\circ$ (0, m)
- (d) Chemical vapor deposition is a method which is used to obtain the
- (i) Semiconductors
 - (ii) Crystalline semiconductors
 - (iii) Conducting compounds
 - (iv) Dielectric compounds

- (e) The gel is a _____ mass.
- (i) Heavy molecular
 - (ii) Semi rigid
 - (iii) Rigid
 - (iv) Gaseous.

2. Answer the following questions : $2 \times 5 = 10$

- (a) Explain the physical mechanism of sputtering with the help of schematic diagram. 2
- (b) Explain how the film thickness can be controlled in DC sputtering technique. 2
- (c) Discuss the pre nucleation theories of thin film growth. 2
- (d) What is band edge and defect state luminescence ? 2
- (e) What is localized surface plasmon resonance phenomena ? 2

3. Answer any five of the following questions : $5 \times 5 = 25$

- (a) Establish the Einstein relation of mobility and diffusion coefficient. 5

(iv) In AC Josephson effect a very high frequency of electromagnetic radiation emanates from the gap.

(iii) In DC Josephson effect the superconductors are separated by a very small thickness.

(ii) In AC Josephson effect the voltage drop across the superconductor is zero.

(i) In AC Josephson effect current persists for a short time.

(a) Which of the following statement is not true ?

$1 \times 5 = 5$

I. Answer the following questions :

The figures in the margin indicate full marks for the questions.

Time - Three hours

Full Marks - 80

(Condensed Matter Physics-II)

Paper Code : PHY-305 (Old)

(Theory Paper)

- (b) The drift current density under reverse bias is due to the
 (i) Minority carriers
 (ii) Majority carriers
 (iii) Both majority and minority carriers
 (iv) None of the above
- (c) The coherence length of a superconductor becomes zero
 (i) The distance where the magnetic field
 of the extreme applied magnetic field
 (ii) The distance required to fall to $1/e$ times
 (iii) The distance up to superconducting
 electron density doesn't change drastically
 (iv) Independent of the fermi velocity and energy gap
- (d) A phonon is emitted or absorbed in
 (i) Elastic scattering of a photon by a crystal
 (ii) Inelastic scattering of a photon by a crystal
 (iii) Both the elastic and inelastic scattering of a photon by a crystal
 (iv) None of the above

(e) In an indirect bandgap semiconductor, a transition between conduction band and valance band results in

(i) Heat

(ii) Light

(iii) Both

(iv) None of the above.

2. Answer the following questions : $2 \times 5 = 10$

(a) Discuss the Beers law for an absorbing medium. 2

(b) Explain the interband transition for direct band gap and indirect band gap semiconductors. 2

(c) What is de Haas van Alphen effect and for what purpose it is used ? 2

(d) What is isotope effect in superconductivity? Explain with examples. 2

(e) What is BCS ground state ? 2

3. Answer any five of the following questions :

$5 \times 5 = 25$

(a) Show that the depletion width of a p-n junction is given by 5

$$W = \left[\frac{2eKT}{q^2} \left(\ln \frac{N_a N_d}{n_i^2} \right) \left(\frac{1}{N_a} + \frac{1}{N_d} \right) \right]^{\frac{1}{2}}$$

(b) Deduce the flux quantization in superconducting ring. 5

(c) What is Frohlich's electron-phonon interaction? Explain the BCS theory of superconductivity. 5

(d) Explain the term phonon. What is the momentum of phonon? Discuss the Normal and Umklapp process of phonon scattering using relevant momentum vector diagram. $1+1+3=5$

(e) Obtain the dispersion relation of a linear dielectric medium using Maxwell's equations in the absence of free charge and current densities. 5

(f) What is cyclotron resonance? Obtain the expression for resonant frequencies of an electron in magnetic field. $1+4=5$

4. Answer any four of the following questions :

$10 \times 4 = 40$

(a) Discuss the rectifying and ohmic metal-semiconductor contacts with proper energy band diagrams. Explain the effect of interface states in the metal-semiconductor contacts. $8+2=10$

- (b) Obtain the continuity equation for electron and holes, and derive the diffusion current density for excess holes or electrons. 5+5=10
- (c) What is London penetration depth? Derive the expression for London equations in superconductors and discuss their significance. 2+8=10
- (d) (i) Explain the classical theory of the response of a solid to an oscillating electromagnetic field and obtain an expression for the real part of the dielectric function in terms of the plasma frequency. 5
- (ii) State and explain the Franck-Condon principle. 1+4=5
- (e) (i) Explain the term excitons. How exciton absorption affects the absorption spectrum of a semiconductor? 1+4 =5
- (ii) How do you describe the optical properties of a solid? Explain the transition mechanism of direct and indirect band gap of a semiconductor with the help of band diagram and give example for each type of transition. 1+4=5
