CHAPTER - 1	
1. INTRODUCTION	
1.1. Introduction	2
1.2. Zoonotic cycle of helminth parasites	4
1.3. Helminths and their infections	7
1.4. Global epidemiology of helminthiasis	9
1.5. Anthelmintic drugs and their mode of action	10
1.6. Bioinformatics in drug discovery and development	11
1.7. Urge for novel anthelmintic agents	12
1.8. Exploring anthelmintic agents from plants	13
OBJECTIVES	17-18
CHAPTER - 2	
2. REVIEW OF LITERATURE	20
2.1. INTERNATIONAL	20
2.2. NATIONAL	24
2.3. REGIONAL	29
CHAPTER - 3	
3. MATERIALS AND METHODS	36
3.1. Collection, authentication, and preparation of crude extract and solvent fractions	36
3.2. Solvent Fractionation	37
3.3. Qualitative and quantitative phytochemical analysis	38

I. Qualitative phytochemical analysis	38
A. Alkaloids test (<i>Dragondroff's test</i>)	38
B. Test for Phenolics	38
C. Flavonoid test	39
D. Quinones test	39
E. Terpenoid test	39
F. Tannins test (Ferric Chloride Test)	40
G. Coumarin test	40
H. Anthocyanin test	40
I. Glycosides test	40
J. Anthraquinones test	41
K. Steroids test (Salkowski's test)	41
L. Carbohydrates test	41
M. Saponins test	42
N. Protein test (Ninhydrin)	42
O. Phlabotannins test	42
II. Quantitative Test	42
A. Protein Assay	42
(i) Preparation of Standard Curve for BSA	43
(ii) For plant extracts	44
B. Carbohydrate (Glucose) Assay	45
(i) Preparation of Standard Curve for Glucose	45
(ii) For plant extracts	46
C. Total Phenolic Content	47
(i) Preparation of Standard Curve for Gallic acid	47
(ii) For plant extracts	48
D. Total Flavonoid Content	49
(i) Preparation of Standard Curve for Quercetin	49
(ii) For plant extracts	50
3.4. Elemental Analysis	50
3.5. Antioxidant Study	51
I. Total Antioxidant Capacity Assay	51
(i) Preparation of Standard Curve for Ascorbic acid	52

(ii) For plant extracts	52
II. Ferric Reducing Antioxidant Power Assay	53
(i) Preparation of Standard Curve for Ferrous sulphate	53
(ii) For plant extracts	54
III. 1,1-Diphenyl 2-Picrylhydrazyl Radical Scavenging Activity	55
(i) Preparation of Standard for Gallic acid	55
(ii) For plant extracts	56
IV. Lipid Peroxidation inhibition assay	57
(i) Preparation of Standard for Gallic acid	57
(ii) For plant extracts	58
V. 2,2'-Azinobis-(3-Ethylbenzothiazoline-6-Sulfonate) Assay	58
(i) Preparation of Standard for Gallic acid	59
(ii) For plant extracts	60
3.6. Collection of the helminth parasite	61
I. In-vitro anthelmintic study	61
3.7. Histological study	62
3.8. Biochemical study	63
I. Acid phosphatase	63
(i) Preparation of Standard Curve for p-nitrophenol	64
(ii) For tissue homogenate	64
II. Alkaline phosphatase	65
(i) Preparation of Standard Curve for p-nitrophenol	66
(ii) For tissue homogenate	66
III. Malate dehydrogenase	67
IV. Lactate dehydrogenase	68
V. Acetylcholinesterase	70
3.9. Thin Layer Chromatography	71
I. Preparation of extract from the TLC	72
II. In-vitro anthelmintic study using fractions obtained from TLC	72
3.10. Column Chromatography	73
I. Liquid Chromatography- Mass spectrometry analysis	73
II. High-Performance Liquid Chromatography	74
3.11. In-vitro anthelmintic study with active compound	74

3.12. Histological study	74
3.13. Scanning Electron Microscopy	75
3.14. Biochemical study	76
I. Acid phosphatase	76
II. Alkaline phosphatase	76
III. Malate dehydrogenase	76
IV. Lactate dehydrogenase	76
V. Acetylcholinesterase	77
3.15. Protein modeling and active site prediction	77
3.16. Docking study	78
3.17. Analysis of drug-likeness and ADMET profile	78
3.18. Molecular Dynamics Simulation Study	79
3.19. Molecular Mechanics/Poisson Boltzmann Surface Area analysis	79
3.20. Statistical analysis	80
CHAPTER - 4	
4. RESULTS	82
4.1. Collection, authentication, and preparation of crude extract and solvent fractions	82
4.2. Solvent Fractionation	82
4.3. Qualitative and quantitative phytochemical analysis	83
I. Qualitative phytochemical analysis	83
II. Quantitative analysis	85
4.4. Elemental Analysis	87
4.5. Antioxidant study	88
4.6. In-vitro anthelmintic study	92
4.7. Histological study of Paramphistomum species with diethyl ether plant extract	94
4.8. Biochemical Enzyme Assay	96
4.9. Thin Layer Chromatography	98
I. Diethyl ether extract	99
II. In-vitro anthelmintic study	99
4.10. Column chromatography	100
I. Liquid Chromatography- Mass spectrometry analysis	100

II. High-performance liquid Chromatography	101
4.11. In-vitro anthelmintic study with active compound (Quercetin)	102
4.12. Histological study with quercetin	103
4.13. Scanning Electron Microscopy	104
4.14. Biochemical Enzyme Assay	106
4.15. Protein modeling and Molecular docking with the best solvent Extract	107
4.16. Docking study	110
4.17. Analysis of drug-likeness and ADMET profile	113
4.18. Molecular Dynamics Simulation Study	115
4.19. MMPBSA Analysis	121
CHAPTER - 5	123
5. DISCUSSION	
5.1. Phytochemical Analysis of Plant Compounds and Their Therapeutic Potential	125
5.2. Anthelmintic Potential of <i>Hypericum japonicum</i>	129
5.3. Identifying Bioactive Compounds in <i>Hypericum japonicum</i>	131
5.4. Anthelmintic Activity of <i>Hypericum japonicum</i> and Its Bioactive Compound Quercetin: Targeting Key Enzymes in Helminth Parasites	133
5.5. Histological and Ultrastructural Analysis of Paraphistomum Species Treated with <i>Hypericum japonicum</i> Extract and Quercetin	136
5.6. In Silico Analysis of Bioactive Compounds in <i>Hypericum japonicum</i> and Their Interaction with Enzymes	138
5.7. Drug-likeness and ADMET analysis of the Bioactive compound	140
5.8. Molecular Dynamics Simulations for Evaluating the Binding Affinity of ligands to Acetylcholinesterase (AChE)	141
5.9. Molecular Dynamics Simulations and Protein-Ligand Interactions	141
5.10. Hydrogen Bonding and Binding Affinity	142
5.11. Total Energy and Thermodynamics of Binding	142
5.12. Structural Stability and Protein Flexibility	143
CHAPTER - 6	
6. CONCLUSION	145
