

LIST OF FIGURES

- Figure 4.1a Comparative data of proximate compositions (Moisture and Total Solids) of the twenty wild edible insects.
- Figure 4.1b Comparative data of proximate compositions (Ash and Fat) of the twenty wild edible insects.
- Figure 4.1c Comparative data of proximate compositions (Total Proteins and Carbohydrates) of the twenty wild edible insects.
- Figure 4.1d Comparative data of proximate compositions (Dietary fibre) of the twenty wild edible insects.
- Figure 4.2a Comparative data of individual mineral compositions (Potassium and Sodium) of the twenty wild edible insects.
- Figure 4.2b Comparative data of individual mineral compositions (Calcium and Magnesium) of the twenty wild edible insects.
- Figure 4.2c Comparative data of individual mineral compositions (Phosphorus and Zinc) of the twenty wild edible insects.
- Figure 4.2d Comparative data of individual mineral compositions (Iron and Copper) of the twenty wild edible insects.
- Figure 4.3 Comparative data of Essential and Nonessential amino acid compositions of twenty wild edible insects.
- Figure 4.4a Comparative data on Saturated and Monounsaturated fatty acids compositions of twenty wild edible insects.
- Figure 4.4b Comparative data on Polyunsaturated fatty acids compositions of twenty wild edible insects.
